EDUCATION

Georgia State University

Atlanta, GA

Bachelor of Science in Computer Science, Concentration in Data Science GPA: 3.9/4.3

Graduation: December 2025

Relevant Coursework: Machine Learning, Deep Learning, Data Structures & Algorithms, Object Oriented Programming, Software Development, Operating Systems, Database Systems, Data Science, Linear Algebra, Probability and Statistics

TECHNICAL SKILLS

Languages: Python, SQL (Google BigQuery, MySQL), Java, TypeScript, JavaScript, C, PHP, HTML/CSS, R, Bash
Frameworks & Platforms: TensorFlow, PyTorch, Scikit-learn, FastAPI, Flask, Apache Airflow, React, Node.js, React Native, Next.js, Hugging Face, Databricks, AR/VR, Snap Lens Studio, FFmpeg, Uvicorn
Developer Tools & Cloud: Google Cloud Platform (GCP), Microsoft Azure, Snowflake, Git, GitHub, Firebase, Supabase, DBeaver, Figma, Docker, Jupyter, AWS S3, NVIDIA CUDA
Libraries & APIs: Pandas, NumPy, XGBoost, OpenCV, MediaPipe, Dlib, Matplotlib, Seaborn, Tkinter, REST, WebSockets, JSON, Google APIs, Spotify API, Eventbrite API, First-Order Motion Model (FOMM), Wav2Lip, FFmpeg-Python, TQDM
AI Solutions: Retrieval-Augmented Generation (RAG), Generative AI, Machine Learning, Deep Learning, Lip-Sync Models, Multimodal AI Orchestration

EXPERIENCE

AI - Data Science Intern

May 2025 – August 2025

Intuit Inc.

Atlanta, GA

- Designed and deployed scalable SQL pipelines on BigQuery to curate training, calibration, and scoring datasets from 1M+ customer records, optimizing inputs for Customer Success propensity modeling.
- Trained and evaluated XGBoost model on 100k+ labeled samples, achieving an AUC of 0.82, improving recall by 47x and boosting score reliability by 20% via calibration with separate holdout sets. Deployed the model to production for daily scoring.
- Built and orchestrated Apache Airflow DAGs to automate the end-to-end data flow — from generating training/calibration/scoring cohorts to running daily production scoring — enabling hands-free integration within the Customer Success pipeline and ensuring continuous production performance.

Data Analyst Intern

August 2024 – November 2025

Griffin & Strong, P.C.

Remote

- Streamlined data processing using Python, SQL, increasing data accuracy by 13% and enabling reliable, insight-driven reporting.
- Developed interactive dashboards and statistical reports, boosting stakeholder engagement by 15% through clear and actionable visualizations.
- Enhanced pipeline efficiency by automating database cleaning and management tasks, resulting in 27% faster data delivery for ongoing reports.

Computer Science Tutor

Aug 2025 – Current

Knack Tutoring

- Provided tutoring support across CS courses from introductory programming through graduate-level courses, strengthening student skills in coding, algorithmic thinking, and data analysis.
- Delivered customized 1:1 and group sessions in Python, Java, SQL, Data Structures, Design & Analysis of Algorithms, Machine Learning, Data Mining, Database Systems, and Software Development simplifying complex concepts to improve student performance.

Web Development Project Manager Intern

March 2024 – July 2024

Resilience

Remote

- Managed company websites by troubleshooting bugs, optimizing plugin usage, and integrating new features, leading to a 22% boost in site performance.
- Executed website improvements based on user feedback, conducted QA testing, and optimized performance, resulting in a 17% increase in user satisfaction.

PROJECTS

ModelMaestro | Python, Vertex AI, FastAPI, XGBoost, AutoML, Google Cloud Platform (GCP), Pandas, Scikit-learn

- Built an automated machine learning pipeline that accepts a user-uploaded dataset and prompt, performs dataset profiling, infers task type, and selects an appropriate model without manual configuration.
- Designed a model routing engine leveraging XGBoost and Vertex AutoML Tabular, enabling consistent and scalable model training with standardized evaluation outputs and performance metrics.
- Developed a FastAPI backend integrated with Google Cloud Storage and Vertex AI for secure dataset handling, model artifact management, and one-click deployment to real-time inference endpoints.

Frame Flow | Python, TensorFlow, MediaPipe, OpenPose, OpenCV, AWS, NumPy

- Built a real-time dance coaching platform using pose estimation models, achieving over 92% frame alignment accuracy.
- Developed joint-level similarity analysis with Euclidean distance and Dynamic Time Warping, and integrated corrective feedback that improved user accuracy by 70%.
- Created a self-improving architecture that refines models with new videos, adapting across lighting, body types, and camera angles.
